

Legal Notice

On January 17, 2017, Glacier Stone Supply LLC (Glacier) submitted an Operating Permit Application to the Department of Environmental Quality (DEQ) seeking authorization to operate two rock quarries on private property in Flathead County. The rock quarries are in close proximity to each other and are located in portions of Section 4, Township 27 North, Range 24 East, approximately three miles Southeast of Marion, MT.

Rock would be removed from the two sites using heavy equipment such as bulldozers, loaders, and backhoes. Generally, the rock would be quarried from rock outcrops and /or talus slopes. The quarry operations, however, may include possible drilling and blasting.

Access to the proposed quarry sites would be by way of public and private roads. Roads constructed to access the quarries would be reclaimed at closure or left for private access at the request of the property owner. The mine life is projected to be up to twenty five years.

DEQ will process the Operating Permit Application under the Metal Mine Reclamation Act, including the preparation of an environmental assessment. Copies of the operating permit application can be viewed at DEQ offices located at 1520 E. 6th Ave., in Helena, MT or on DEQ's website <http://deq.mt.gov/Land/hardrock>

For information on the Operating Permit Application, contact:
